My Goal

My goal is to harness the power of data to create meaningful solutions that make a difference on social, economic, and individual levels. I see artificial intelligence not as a system that replaces people, but as a collaborator that enhances human creativity and productivity.

My vision for the future is to contribute to an ethical, sustainable, and human-centered approach to AI. As someone who is curious, eager to learn, and passionate about building meaningful things, I'm committed to growing and making an impact in this field.
